Mobile Document Reader (Developer)

Use this profile to test the Mobile Document Reader API on iPhone API without requiring a separate device with a provisioned mobile driver's license.

Installing this profile will cause the system to simulate a successful mobile document read when using the Mobile Document Reader API. The simulated response will represent an artificial user, and does not contain any personally identifiable information from an actual person or real driver's license.

The Mobile Document Reader API Developer Integrator profile causes the system to return responses that allow you to test the new Mobile Document Reader API without requiring a second device with a real driver's license added. The system will return responses representing an artificial user, meaning the API responses do not contain data from a real person or driver's license. The API responses will not contain any personally identifiable information of any user, and are to be used only for testing this API. By enabling the Mobile Document Reader API Developer Integrator profile and receiving the generated files, you agree that you will not use the API responses for any purpose other than testing this API. At all times, information received by Apple will be treated in accordance with Apple's Privacy Policy, which can be found at www.apple.com/privacy.

Installing the Profile

Note: This profile will expire after 365 days**.**

1. Download the profile to an iOS device.
   If necessary, email the profile or use AirDrop to transfer the profile to the iOS device.
